PC 911 ACQUIRES FOUR AMBULANCES; Computing Emergency Vehicles to be Converted to Green Fuel System

Las Vegas – April 8, 2008 – [PC 911](http://www.pc911lv.com) (www.pc911lv.com), Las Vegas' largest mobile technical service for computer and network repair today announced the acquisition of four ambulances to service the Las Vegas area, bringing its current local fleet to eight.

The “new” ambulances, at an average price of \$5000 each are all Ford E-350s are models from the late 1980s and 1990s and will all be converted to “green” operation: They will run on recycled vegetable oil.

Chad Stone, Founder and President of [PC 911](http://www.pc911lv.com), said that “The \$1,200 we spend on each ambulance for conversion is a small price to pay for doing our part in helping the environment. Moreover, it is a clear example of how doing the right thing can provide a business with significant cost benefits.”

Stone said, “Each ambulance burns about 50 gallons of recycled vegetable oil weekly. The math is simple, we’re saving about \$200.00 a week in fuel costs, which for us are almost nothing, while helping to keep our air clean.”

Each of the [PC 911](http://www.pc911lv.com) emergency vehicles makes an average of five calls daily and carries an inventory of about 500 of the most common computer repair parts, as well as a compressed air unit for cleaning computers.

About PC 911

[PC 911](http://www.pc911lv.com) provides outsourced IT services, including wireless networking, data transfer, PC repair, PC installation, virus and spyware removal, and business telephone system installation to small to medium sized business, as well as onsite computer repair for residential users.
