PC911 EXPANDS TO PHOENIX

Las Vegas – May 8, 2008 – PC911, one of the nation’s leading mobile technical services for computer, network and telephony repair and maintenance for business and residence, today announced that it will open a facility in Phoenix, Arizona on May 12, 2008.

The Phoenix office, PC911’s first outside of Nevada, is located at 2633 North 37th Avenue and has 2,600 square feet of technical service and office space.

The new office will initially have four technicians, all of whom have gone through PC911 specific training, with three decades of experience in the aggregate.

PC911 started in Las Vegas just 30 months ago and was quickly recognized by its unique service vehicles: Ambulances, fully stocked with the most required computer repair parts, that run on recycled vegetable oil gathered from local restaurants and recycled at the company’s proprietary fueling station, rather than diesel fuel. The Phoenix office will have four “green” PC911 ambulances, as well as a refueling station at the North 37th Street facility.

The “new” ambulances, all Ford E-350s from the late 1980s to early 1990s, assigned to Phoenix were acquired last month specifically for the Phoenix office and were converted to run on recycled vegetable fuel just last month. Each ambulance burns about 50 gallons of recycled vegetable oil weekly.

Chad Stone, President, said “We are pleased and excited to move into the Phoenix market. It is one of the fastest growing cities in the nation and closely resembles our headquarters market in Las Vegas.

“While our ambulances certainly make PC911 unique, it is our service that is most unique in our business. We are exceptionally proud of the fact that we are able to solve 90 percent of our emergency calls on site and virtually 100 percent of those that require offsite repair are returned within 24 hours, all, I might add, in vehicles that are 100 percent green.”

About PC 911

PC 911 provides outsourced IT services, including wireless networking, data transfer, PC repair, PC installation, virus and spyware removal, and business telephone system installation for small to medium sized business, as well as onsite computer repair for residential users.
